Course: Python

Topic: Syntax errors

Repository name: Sneha-G

Name: Sneha.G

USN: 4AL18ECO50

Sem : IV sem

Report:

Syntax errors:

- errors of 2 types - Syntax error Expectations

  File 'error.Py", line 3

      int 999

      Syntax error : Invalid syntax

- Runtime errors

  Best programming questions ?
- but should be error message & the code
  should be copied & posted.

  Error handling :

```
a = 1
b = 2
c = 3
print [int (2, 5)]
print [c/o]
```

```
def divide (a/b):
    return a/b
print (divide (1, 0))
```

error → zero division error: division by zero

Application to build website blocker:

- Inside the parenthesis of any () there's another loop that iterate over website list.
  ("face" in "trees are good")
  ("clock" in "trees are good")
  ("trend" in "trees are good")

If any of the above is true then exp is as true
In case none of them is true, show as False

Schedule a python program:
- Sign up for free acc at
  https://www.pythonanywhere.com
- Go to your dashboard, files upload a file
- Go to tasks & set the time of day you want your script to be executed
- click 'create' button.
